Auger Motor Bracket Kit (MF3636)
for model number (s) 3500P, 3500L, 3502, 6500, 7500

AES has introduced a new auger motor bracket for all models of Magnum Countryside and Furnace models. This bracket is an upgrade from previous brackets that incorporated the new style auger system but used the four (4) bolt system (the long bolts slid into the auger motor housing) to hold the auger motor in alignment with the auger.

American Energy Systems has provided this bracket kit to their dealers free of charge, as a service to our dealers and to get feedback. All you have to do is provide it to your clients. The upgrade kit is not intended as a warranty/service item and the dealership would charge for this upgrade and the installation.

This upgrade is not intended for models where the auger motor was bolted directly to the auger housing plate. If you choose to upgrade the older system you will need to replace the existing auger with the new auger system and purchase the upgrade kit.

Pricing and availability can be established by contacting our dealer support department at dealersales@magnumheat.com

Please check our website www.magnumheat.com for up to date product and information reports.

Thank you for your business and promotion of Magnum products.
